

## Platinum class

This month, Platinum Class has travelled millions of years back in time as we explored the fascinating world of *prehistoric life*! Our young explorers have immersed themselves in all things dinosaur, identifying their unique features, classifying them as carnivores, herbivores, or omnivores, and even sorting them by habitat, whether they roamed the land or swam through prehistoric seas.

From the towering Tyrannosaurus rex to the gentle Brachiosaurus and the swift Velociraptor, the class have become true dinosaur experts! They've developed impressive knowledge about the traits and diets of various species and have enjoyed hands-on learning to support their discoveries.

The highlight of our topic was the unforgettable day Platinum Class became palaeontologists for the day. Equipped with tools and curiosity, they carefully dug for fossils, learning how these ancient remains form over time. The excitement didn't stop there, students created their very own fossils using slices of bread and hard objects to mimic the fossilisation process. It was a fun and tactile way to bring the science of palaeontology to life.

It's been a roaring success of a topic, filled with curiosity, discovery, and imagination, and we're so proud of everything Platinum Class has learned!
