

## Red class

This month in Science, we have been looking at changing states of matter. We looked at solids and liquids and the change from one to the other. We looked at reversible changes and irreversible changes. We conducted experiments with eggs, chocolate and toast to see what changes would occur if we added heat, and whether we could reverse them. We recorded predictions and results.

In our Outdoor Learning, we have been making art from nature. We made leaf prints in clay and painted them. We made collages in the playground to reflect our environment, finding small samples of natural materials and sticking them on. We were careful not to damage the environment when collecting materials.

We have begun learning about World War 2 in our World About Me lessons. We have learned about peace and conflict, and we all agreed it was good to be peaceful. We learnt about Winston Churchill and the bravery of the soldiers in the war. We designed red, white and blue medals to reflect this.
