

Welcome back to another exciting academic year! Green class is exploring the topic of 'School'. The first couple of weeks back they explored the school grounds and different rooms in the building. This was especially helpful for some of our new pupils who have joined Hollywater School this year. Pupils designed and made structures of different rooms in the school. In English pupils learned about letters and what happens to letters when we post them. They looked at all the different types of letters and ways to communicate with others that may live far away from us. In Computing pupils worked on developing skills to present their ideas using PowerPoint. They worked on completing a PowerPoint about our school. In PE pupils enjoyed learning ball skills and applying this to football games. They also applied their skills to playground games and are beginning to follow more rules that games have. In Discovery they have been learning all about our local area. They used google maps to find out where different shops and parks are as well as where they live and of course where our school is. During Science lessons, pupils explored push and pull forces. They looked at how different toys work and the types of forces they need. They made paper kites and tested them out on the playground. There was not much wind but they discovered that by pulling and running they could make their kites fly!

Congratulations to our Stars of the Week this month!
